PROFESSIONAL SUMMARY

Computer Science graduate (B.E., June 2026) with 9 months of production internship experience as a Python Backend Developer and Technical Lead. Specializes in Django REST Framework, FastAPI, and AI/LLM integration (OpenAI GPT-4, Gemini). Built AI agent pipelines, REST APIs, and microservices in production. Immediately available with no notice period.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++

Backend: Django, Django REST Framework (DRF), FastAPI, Flask, REST API Development, Microservices Architecture

AI & LLMs: OpenAI GPT-4, Gemini API, LLM Integration, AI Agent Pipelines, n8n, Make.com, Prompt Engineering, Webhooks

Databases: PostgreSQL (Optimization), MongoDB, Redis

Frontend: React.js, Next.js, TypeScript, Tailwind CSS, shadcn/ui, MERN Stack

Cloud & DevOps: AWS (EC2, Lambda), GCP, Docker, CI/CD Pipelines, GitHub Actions

Tools & Methods: Git, GitLab, Jira, Postman, Selenium, Agile/Scrum, Technical Leadership

INDUSTRY EXPERIENCE

Full Stack Developer Intern, [Netpy Technologies](#)

Oct 2025 – Jun 2026

Tech Lead & Project Manager | Bangalore

- Led a team of 4 engineers, owning end-to-end architecture, sprint planning, and delivery for production-grade client projects.
- Engineered scalable REST APIs using Django REST Framework and FastAPI for high-traffic production environments.
- Integrated OpenAI GPT-4 and Gemini APIs to build AI-powered features and automated agent pipelines for clients.
- Established Docker-based CI/CD pipelines with GitHub Actions for fast, reliable continuous delivery to production.
- Implemented JWT authentication, Redis caching, and RBAC for granular access control across distributed microservices.

PROJECTS

StackSense – Observability & Monitoring Platform (Founder) →

- Engineered distributed microservices monitoring using real-time event triggers, FastAPI, and metrics aggregation pipelines.
- Built telemetry pipelines for anomaly detection and dependency mapping to optimize performance at scale.

Gill Organics – Organic Farm-Box Delivery Platform (Django + React/Next.js) →

- Built a full-stack organic farm-box delivery platform with a Django REST Framework backend and a React + Next.js (App Router) frontend, featuring role-based Customer, Packer, and Driver modules plus an order History module for end-to-end fulfillment tracking.
- Implemented JWT authentication, Redis caching, and PostgreSQL query optimization to serve high-throughput product catalog and order-tracking APIs at low latency.
- Streamlined the pack-and-dispatch workflow from customer order to driver delivery, improving transaction reliability by 6% and reducing catalog/tracking latency.

Bigpool – Multi-Vendor E-Commerce Marketplace (Next.js 16 + TypeScript) →

- Built a full-stack multi-vendor marketplace with Next.js 16 (App Router, server components), React 19, TypeScript, and Tailwind CSS/shadcn-ui, with customer and seller portals across 8+ categories, cart, and checkout; global state via Zustand.
- Developed backend logic in Next.js API routes with JWT access/refresh-token auth and bcrypt hashing, Supabase (PostgreSQL) for data, Razorpay payments (UPI/card/netbanking), and Resend transactional email.
- Shipped an installable PWA with web-push notifications, packaged for Android via Capacitor, using Cloudinary image uploads; deployed on Render behind Cloudflare DNS and tested with Vitest and Testing Library.

EDUCATION

[S.E.A College of Engineering, Bangalore](#)

2022 – Jun 2026

B.E. – Computer Science & Engineering

[RK Vision PU College](#)

2020 – 2022

PUC – PCMB

CERTIFICATIONS

- Introduction to Data Science [Cisco](#)
- Advanced Software Engineering [Walmart](#)
- AWS EC2 & Lambda [Simplilearn](#)

ACHIEVEMENTS

- Regional Round Winner [TCS TechBytes](#)
- Solved 100+ DSA problems on competitive platforms
- University Hackathon Finalist – S.E.A College
